

STEPHEN FRAZIER
MUSCLE ASYLUM PROJECT™ TEST SUBJECT

ULTRA-DRY

SHREDDED CONDITIONING:
Arson™ works to eliminate your body's subcutaneous water retention that hides extreme muscle definition and vascularity. Using Arson during his contest prep, Stephen Frazier was able to reveal crisp separations throughout every inch of his back and cable-like cuts in his hamstrings!

EXPOSE

DRAMATIC MUSCULARITY:
To help preserve muscle mass, the key ingredients in Arson are proven to increase 24-hour energy expenditure without increasing total urinary nitrogen excretion. This helps you burn fat while sparing lean striated muscle.

THE HARDEST HITTING FAT BURNER EVER!

Find out how Arson™, a scientifically engineered fat burner, helped unknown bodybuilder Stephen Frazier finish in the top three at the NPC nationals and how Arson can help you get absolutely shredded too!

In today's fiercely competitive line-ups, freaky size isn't nearly enough to win – a lesson known all too well to Stephen. After a disappointing 12th place finish in 2006, he knew he'd have to melt away the fat and subcutaneous water that was blurring the razor-sharp striations and deep muscle separations on his 300+ pound off-season physique. While this reinvention process was going on, the innovative researchers at the Muscle Asylum Project™ were looking for bodybuilding subjects to test out the new pro-competition strength fat burner – Arson™.

"ARSON is packed with patented key ingredients at a dose CLINICALLY PROVEN to BURN 35 PERCENT MORE FAT!"

While continuing to train and prepare for the NPC Nationals, Stephen added Arson into his supplement arsenal for its extreme fat-burning effects. With each liquid, rapid-release heat-injected capsule consumed, a powerful three-staged fat-burning process ignited. In fact, Arson is packed with patented key ingredients at a dose clinically proven to burn 35 percent more fat! In stage one, key ingredients in Arson block adenosine receptors to

amplify your body's critical fat-burning hormone noradrenaline by 40 percent. As this happens, stage two inhabits alpha-2 receptors, forcing the fat-burning signal to remain at extreme thermogenic levels. During the third and final stage, Arson shuttles newly mobilized free-fatty acids directly to your muscles where they can be burned as fuel, creating thermogenic heat.

"Bodybuilder Stephen Frazier TORCHED 20 SUPER-HEAVYWEIGHT competitors and catapulted himself to a top-three finish using ARSON."

Walking out on stage at the NPC Nationals, Stephen immediately captured the attention of the judges with his best ever razor-sharp, desert-dry conditioning. With this new level of conditioning, Frazier wiped out a total of 20 super-heavyweight competitors to earn a respectable 3rd place finish. It's time for you to take your conditioning to a whole new shredded level with Arson – the hardest hitting fat burner ever. Get it today and experience its mind-blowing fat-burning effects!
